Submission Guidelines

Please note that these guidelines are subject to change; last edited on June 21, 2018.

[AfricArxiv is open for submissions](#)

Why should you publish on the AfricArxiv preprint repository? >> [Preprint FAQs](#)

AfricArxiv is not a journal and does not evaluate the scientific quality of a paper in all details. Once a paper passes moderation and is published, it persists on the OSF system indefinitely. We reserve the right to remove papers after publication if fraud or plagiarism is identified.

Most academic journals do accept preprint publications, some don't. To find out more we recommend to check [RoMEO Statistics](#).
Note that preprint publication does not replace publishing with peer-reviewed acdemic journals. We recommend authors to use the [SHERPA/RoMEO](#) service to check journal preprint policies for further details on self-archiving options for the journal/s where you plan to publish.

AfricArxiv accepts the following types of manuscript, preprint or postprint:
- Research articles
- Review papers
- Case studies
- 'negative' results
- 'null' results (i.e. results that do not support a hypothesis)
- data and methods papers
- Technical notes
- Dataset description papers
- other manuscripts will be considered upon submission.

We encourage submissions from
- African scientists based on the African continent
- African scientists who are currently based at a host institute outside Africa
- non-African Scientists who report on research conducted on African territory; preferably with African co-authors listed
- non-African Scientists who report on research relevant to African Affairs

Languages
We encourage submissions in languages that are commonly used by the scientific community in the respective country, such as English, French, Swahili, Zulu, Afrikaans, Igbo, Akan, or other indigenous African languages. Papers submitted in non-English languages will be held in the moderation queue until we can get them verified. We encourage you to suggest people who could assist in moderating in your language.

How to share an article on AfricArxiv

1. To prepare your manuscript for submission (either as a text or PDF file) please use a standard text editor (MS Word, Open Office, rtf).

2. Before submitting, it is recommended to add a note to the front page stating **"This is a preprint that has been submitted to journal XXX"** where applicable. Once the manuscript is accepted by peer-reviewed journal you can update the preprint to the postprint or accepted author manuscript, please change to **"This is a postprint that has been peer reviewed and accepted at journal XXX."**

   Please check for journal compliance and embargo periods where needed.

3. Once your manuscript is ready, please go to the [submission portal](#) to share your article.

4. To login as a first-time user create an OSF account or sign in with your ORCID.

5. To upload a new manuscript, simply drag and drop the file from your desktop, and then click save to begin the upload.

6. Select any relevant disciplines from AfricanArxiv's taxonomy. Add as many as you feel are necessary.
   If you are sharing a version of an article that has been previously published, please add the article DOI here to link them through. You can add any article key words, the date of publication, and the abstract here.

7. To add co-authors, please check first to see if they are existing OSF users. If not, please add them by email, and arrange the author order as needed.
   As common courtesy, please make sure that all co-authors are aware of, and have agreed to, submission. They will be notified upon submission of preprints.

8. Submit your paper. Articles will undergo a moderation check for compliance, and then published online within 3 to 5 working days.

   All published articles will be granted a CC BY 4.0 license and a DOI. All articles are indexed in Google Scholar.

Using AfricArxiv articles

- Please note that preprints are not formally peer reviewed. When re-using them, and especially when citing, this status should be clearly marked.
- Please exercise the same care and judgment you would use for any research output when it comes to the re-use of preprints.
- We strongly encourage community interaction through commenting and sharing of preprints.
